Advanced Process Safety Management

About This Course

Course Description
This course (previously presented by Auditing Roundtable) is targeted to those who are familiar with Process Safety Management (PSM) regulatory requirements but who now need to conduct PSM audits. The course is designed to help both in-house EHS auditors and third-party auditors understand the requirements of these complex regulations. You will also learn how to apply your existing auditing skills in the audit process. As part of the course there will be discussions of the regulations, how OSHA has interpreted them, and a review of selected citations issued by OSHA. In addition, there will be class exercises to help understand what you as an auditor will need to do.

The information in this course should be helpful for those who plan to take the examination for certification as a BEAC® Certified Process Safety Auditor™. However, The IIA does not warrant or assure in any way that the information in this course is representative of the examination questions.
Course Information

Course Duration: 2 Days

CPE/CPD Hours Available: 16

Knowledge Level: Intermediate

Field of Study: Specialized Knowledge

Prerequisites: General knowledge of OSHA Process Safety Management and EPA Risk Management Planning Concepts

Advance Preparation: None

Delivery Format: On-site Training (Group-Live); Seminar (Group-Live)
